

Java Singleton Pattern

"The singleton pattern is a design pattern that restricts the instantiation of a class to one object. This is useful when exactly one object is needed to coordinate actions across the system."

- [Wikipedia: Singleton Pattern](#)

Complete the *Singleton* class in your editor which contains the following components:

1. A *private Singleton* non parameterized constructor.
2. A *public* String instance variable named *str*.
3. Write a *static* method named *getSingleInstance* that returns the single instance of the *Singleton* class.

Once submitted, our hidden *Solution* class will check your code by taking a String as input and then using your *Singleton* class to print a line.

Input Format

You will not be handling any input in this challenge.

Output Format

You will not be producing any output in this challenge.

Sample Input

```
hello world
```

Sample Output

```
Hello I am a singleton! Let me say hello world to you
```
